

## 1" Lug Nut Torque Multiplier

I just got in a brand new item called a 1" lug nut torque multiplier. Have you seen or used them? It is smaller and more efficient than a 1" impact wrench and doesn't need an air compressor to power it. The way it works is it looks like a sawed off shotgun that comes with a 12" extension in front and a crank shaft on the back of the unit. The crank shaft is turned in a 360 degree motion delivering 3500 ft lbs of torque so if you have any bolts or nuts that are frozen its guaranteed to break them loose. Included in the kit is the torque multiplier itself, the crank handle, an extension bar and four 1" drive sockets (21mm, 33mm(1-3/8), 38mm(1-1/2"), and 41mm). Like I said, this unit will put out a whopping 3540 ft/lbs of torque that will break any frozen, rusted, or overtightened lug nut with ease. We are gonna be running these units out at \$450 a piece but we have a promotion on them for anybody who buys a small box of these units i'll pay the freight and tax on the 30 day open account for just 239.90 a unit. That's a great price right!

There are just 3 units per box.
